Professional Summary

Results-driven Software Engineer bringing 3 years of enterprise experience in complex system architecture, algorithmic logic, and data-driven optimization. Combining a lifelong passion for gaming and a recent Unity (C#) certification with deep expertise in building configurable rule engines and probabilistic workflows. Eager to leverage my professional software development foundation, system-optimisation skills, and proficiency with AI-assisted tooling to design compelling, rich experiences, engaging progression loops, and innovative game economies at a competitive organisation.

Education & Certifications

Unity Technologies — Online
Unity Junior Programmer Certification — *Oct 2026*

Gandhi Engineering College (BPUT) — Bengaluru, India
B.Tech in Computer Science Engineering — *Aug. 2019 – May 2023*

Technical & Design Skills

Game Design & Tools: Unity (C#), Mechanics Prototyping, Progression Loops, Playtesting, UI/UX with Figma
Logic & Systems: RNG/Probability Concepts, System Balancing, Camunda BPM 7 (DMN), Decision Automation
AI & Workflows: DistilBERT, Agentic AI orchestration, utilizing GenAI for rapid prototyping, workflow efficiency, and documentation
Software Engineering: C#, Java 21, SQL, Spring Boot, Microservices, RESTful APIs, System Architecture
Data & Analytics: PostgreSQL, Redis, A/B Testing concepts, Performance Optimization (Latency reduction)

Projects & Active Learning

3D Multi-Vehicle Endless Runner (Crew 2 Inspired) | *Unity, C#* — Oct 2026 – Present

- Developing a dynamic 3D driving simulator MVP featuring a seamless vehicle-switching mechanic (car, boat, plane) by utilizing dynamic mesh swapping on a unified Rigidbody to optimize performance.
- Engineering a "treadmill" world generation system for continuous 3-lane terrain chunk loading, focusing on memory optimization and fluid obstacle pacing to maintain engaging gameplay loops.
- Applying Unity Creative Core principles—including post-processing, strategic lighting, and particle effects—to enhance the game feel, visual feedback, and sensation of speed.

Experience

Software Development Engineer — Feb. 2024 – Present
GoDigit General Insurance Ltd — *Bengaluru, Karnataka*

- **Microservices & API Architecture:** Engineered backend microservices for the Industrial All Risk (IAR) portal handling 500+ concurrent transactions/minute with a 99.8% uptime SLA, reducing policy processing latency by 67% via query optimization, Redis caching, and parallelized workflows.
- **High-Performance Concurrent Computing:** Designed parallelized processing workflows using ExecutorService + Callable across 8–16 execution units, reducing composite score calculation time by 58% on the core Risk Assessment platform.
- **Geospatial & Third-Party Integration:** Built resilient backend integration services connecting location-based data processing, Google Maps APIs, elevation data, and environmental risk factors; implemented circuit breaker patterns, KML/KMZ boundary parsing, and paginated lookups.
- **Underwriting Process Automation:** Developed a parallelized computation engine processing 500+ daily risk evaluations with 99.2% classification accuracy, cutting manual underwriting risk evaluation effort by 43% workload.
- **AI Engineering & Intelligent Automation:** Fine-tuned DistilBERT + LoRA classifiers for automated ticket triaging across 5 pathways; architected a multi-agent orchestration framework enabling end-to-end ticket resolution via OAuth2-secured enterprise APIs.
- **Operational Cost & Efficiency Optimization:** Achieved a 45% L1 automation rate processing 1,200 tickets/week (50% increase over baseline), cutting manual triage costs by 52% ($48K annualized savings) while guaranteeing zero misrouted tickets.
- **Database Engineering & Latency Tuning:** Implemented strategic PostgreSQL indexing, batch JPA operations, and connection pooling, boosting query response times by 45% and reducing P99 latency from 850ms to 280ms.
